

## Casemap

Casemap is software that provides database solution for law firms practicing complex litigation, owned by LexisNexis and was launched in 1998. It helps litigation lawyers to bring together important facts, archives, cast and characters and issues of each case as well as legal investigative reports into a concentrated vault for enhanced case evolution. In short, it's a database connecting two spheres of information pinpoints and objects. The facts spreadsheet is used to contain a timeline of undisputed points for a case. It helps to quickly store research in central case repository-alongside related facts and issues and share it with entire case team for analysis. The case law can be searched along with all the other key documents in a case. Our team with expertise in Casemap is determined to generate an updated Casemap. We provide services to-

- ❖ Analyze a complex issue
- ❖ Summarize data to send to an expert
- ❖ Sort, Search, Filter and Grouping options making finding what needed more efficient than ever
- ❖ Search improvements to ensure the capability of advance searching
- ❖ Store facts and documents in a logical convenient manner
- ❖ Perform powerful case analysis
- ❖ Bulk Importing & Optical character recognition (OCR)
- ❖ Enabling litigation teams to work on Casemap file simultaneously

With Casemap, a lawyer gets a chance to boost case information, see associations that may be left behind and to separate practice and fast-forwardness co-operation. We provide full support to make that happen.
